Internetworking With Tcp/Ip: Client-Server Programming and Applications : At & T Tli Version (TCP/IP Vol. III) Douglas E. Comer, David L. Stevens
Comprehensive coverage of building TCP/IP Applications for the popular Windows "TM" Sockets protocol.
-- Covers all server designs including multiservice, multiprotocol, and single-process concurrent servers.
-- Provides a conceptual basis for client and server design that points out the similarities and differences among various client and server designs, the role of concurrency, and when to use each design.
-- Features the most complete coverage of server technology, demonstrating how to apply advanced server technology to applications.

This volume answers the question "How does one use TCP/IP?" -- focusing on the client-server paradigm, and examining algorithms for both the client and server components of a distributed program.

It presents an implementation that illustrates each design and discusses techniques like application-level gateways and tunneling. The book also reviews several standard application protocols and uses them to illustrate the algorithms and implementation techniques.
